AquaxGo™

BlueNexus Technologies

The AI Agent that runs the water plant — it doesn't just think, it acts.

AquaxGo™ is an unmanned, AI-driven system that autonomously runs water plant operations. Working within a closed-loop Online-to-Offline framework, it delivers safe, efficient, and cost-effective performance — with minimal human intervention.

CORE CAPABILITIES

Safety & Predictive Maintenance

Leverages visual, audio, infrared and vibration AI models for safety monitoring, anomaly detection, and preventive maintenance.

Process Optimization

Forecasts operating conditions and autonomously generates control commands to maximize efficiency with BlueNexus self-developed process optimization models.

Autonomous AI Operations

Runs the plant 24/7 — sensing, deciding and acting on its own.

SERVICE CENTER MODEL & PROVEN RESULTS

One center. Many plants. Minimal staff.

AquaxGo™ turns scattered, individually-staffed sites into a single remotely-operated fleet. From one Service Center, a small team supervises multiple plants by exception — the AI runs each site, people step in only when it matters.

In operation: 5 water plants and 1 Service Center, run by a team of just 10.

90%	50%	30%	15%	35%
Labor Savings	Fewer Equipment Failures	Optimized Energy	Optimized Chemicals	Lower O&M Costs

AquaxGo™ Hub

BlueNexus Technologies

From “manual patrol & reactive response” to “AI watch & proactive prevention.”

AquaxGo™ Hub upgrades workshop O&M from people-led, after-the-fact handling to AI-on-watch, prevention-first operation.

PRODUCT OVERVIEW

AquaxGo™ Hub is a compact, easy-to-deploy device that extends the power of AquaxGo™ directly to every plant, workshop, and facility. Combining real-time sensing, intelligent analytics, and autonomous alerting in a self-contained system, it transforms operational data into actionable insights at the point of operation.

Designed for reliable performance with or without network connectivity, AquaxGo™ Hub delivers continuous operational intelligence — enabling smarter decisions, faster responses, and greater resilience across water and wastewater operations.

MULTIMODAL SENSING

Visual AI

Detects leaks, fire, smoke, and unsafe behavior

Acoustic Analysis

Detects abnormal sounds and gas leaks

Infrared Monitoring

Early warning of equipment overheating

Vibration Monitoring

Alerts when vibration exceeds limits

Environmental Indicators

Alerts on abnormal environmental readings

KEY FEATURES

Plug-and-Play

Site, locate and power up. No complex network or existing control system needed.

3D Mobile O&M

iOS / Android app connectivity with real-time highlights.

Open Integration

Standardized API configuration with Token auth & SSL.

Self-contained

Works with or without network connectivity.
